

Social Media Policy

Rationale:

Social networking sites such as Facebook have become an increasingly popular means of communication in recent times and have facilitated widespread communication between people without the geographical barriers that have previously existed to such communications.

Social media gives individuals, groups, organisations and businesses the opportunity to instantly share information with online communities.

Blogs, forums, social networking and video sharing sites are the most popular types of social media sites, however, any forum which allows a user to upload and share information is considered part of the social media space. It is also important to note that information that is shared need not be written; it could take the form of an image or audio visual material.

There are great benefits in increased communication but there are problems which may arise in the use of technology in this way.
